

CyQu Penetration Test Reports

Executive Summary

This report summarizes the findings from a simulated penetration test conducted under the CyQu assessment methodology.

Scope

- External network perimeter validation.
- Web application authentication testing.
- Internal segmentation and privilege escalation testing.

Key Findings

- High: Unpatched vulnerability in legacy service.
- Medium: Insufficient session expiration controls.
- Low: Informational configuration exposure.

Recommendations

Remediation activities should be prioritized according to severity, with high-risk findings addressed within 30 days.
